Project - Garbage Monitoring System Based on IOT -

- This project monitors the garbage bins and informs about the level of garbage collected in the garbage bins via a web page. For this the system uses ultrasonic sensors placed over the bins to detect the garbage level and compare it with the garbage bins depth. The system makes use of AVR family microcontroller, LCD screen, Wifi modem for sending data and a buzzer.

Certification

Full Stack Web Developer (Pursuing)

Newton School

- Advance Java, DSA, HTML ,CSS ,ReactJS, NodeJS, MongoDB.

Certified Software Development Trainee
